

## Defi Sports Display F UPDATE Ver. 5.0 Manual

### 1 . It becomes easier to check the MID when measuring lap time.

when passing the goal line (yellow background)

When measuring lap time, the TIME display (time or lap time) in the MID (multi-information display) area during measurement and when passing the goal line was on a "gray background." This is divided into colors during measurement and when passing through the goal line, and the background color will be changed to "yellow" when passing through the goal line. At the same time, the display time of lap time has been changed from "10 seconds" to "20 seconds." These changes make easier to see the lap times when driving on the circuit.

### 2 . Touch panel sensitivity setting item has been removed.

The responsiveness of the touch panel was be able to be selected from "Normal" and "High sensitivity" in the system settings, but in order to prevent erroneous operation in severe conditions, it has been unified to the "Normal" setting. As a result, the setting items have been removed.
